

Ruby Rails Developer With 2 Years of Experience

Professional Overview:

Well-trained and skilled Ruby on Rails Developer with good experience in web design for a variety of corporate clients. Adept at adjusting work pace to satisfy evolving client needs.

Skills:

- Ruby
- Ruby on Rails
- HTML, HAML, CSS and Bootstrap
- Javascript, JQuery and AJAX
- Installation of Linux operating system and familiar with Linux commands
- Installation of Ruby on Rails environment on Ubuntu
- Ruby version manager such as RVM and rbenv
- Working on Sqlite, PostgreSQL and MySQL databases
- Git, Github, BitBucket and Gitlab
- Docker, Docker-compose, images and Containers
- Deployment on Heroku, Digital Ocean and AWS

Project Management Tools:

- Trello
- JIRA

Educational Qualification:

- Master of Technology in Computer Science & Engineering
- Bachelor of Technology in Information Technology

Key Projects:

- **Title: Pinboard**
Technologies: Ruby, Rails, MySQL
Description: Pinboard is an upscaled platform that brings together members of schools, groups, and different societies to share ideas and requirements via a single, weekly email only sent to groups. Just like a pinboard in hallway users can post and read different types of posts to and from people they know and trust. Users can invite their friends to join Pinboard through a nomination invite system.

Role: Design of the overall architecture of the web application Building reusable code and libraries for future use Optimization of the application for maximum speed and scalability. Integration of the back-end aspects of the web application.

- **Title: VRoamApp**

Technologies: Ruby, Rails, MySQL.

Description: VRoamApp is an application for car renting. Using this app users can rent their car or hire any car on rent for a maximum number of 30 days. Payments were done in-house on the app.

Role: I was responsible for creating the API's to provide to the mobile team and entire admin panel using ruby on rails. For handling the payments I implemented the Braintree payment gateway.

- **Title: EasyMoveApp**

Description: Ruby, Rails, MYSQL.

Scope: EasyMove is an IOS app which helps people shifting their goods by providing vehicles on rent. Vehicle owners can post their vehicles on the app and users can rent the vehicles.

Roles: I was responsible for creating the API's to provide to the mobile team and entire admin panel using ruby on rails. For handling the payments I implemented the Braintree payment gateway.

- **Title: FuelApp**

Technologies: Ruby, Rails, MYSQL.

Description: Fuelapp is an Android and IOS app for ordering fuel online. User submits requests for fuel and the app checks if fuel is available in the requested area or not and based on if the location is serviceable or not. A driver is then assigned to provide fuel to the user. Admin sets the fuel price and service locations from backend.

Roles: I was responsible for creating the Admin Panel from where the admins can set the fuel price and service locations. I was responsible for creating the API's to provide to the mobile team.
